

OT200

the future of ceiling hoists

a complete ceiling hoist solution
with a unique self-charging system

eco-friendly

strong

flexible

A choice of 6-hook spreader bar, manual or powered cradle gives the client ultimate flexibility in the patient transfer. The OT200 is certified with our own as well as leading loop or clip slings

Emergency lowering has always been difficult with ceiling hoists, relying on slow, physical manual lowering or expensive add-ons. The OT200 has an inbuilt safety feature where the emergency lower bypasses all electronics and gears to safely and quickly lower the patient in an emergency

The white-design ensures the system blends into the environment, attracting less attention to the ceiling hoist and its track

The OT200 has many track combinations meaning that your ceiling hoist can be fitted into almost any situation

The unique bracket-less solution means a quick and flexible installation, significantly reducing the disturbance to the client

The OT200 has more than twice the battery life of any competitor due to its unique self-charging feature whenever the hoist is lowered. In addition to the environmental benefits this leaves the client with significantly lower maintenance costs and eliminates the need for a powered rail

The case can be removed within seconds to expose our unique control panel, where the speed and slow-start can be adjusted or where usage can be recorded. It also provides a fault finding readout for quick and painless maintenance

OT200 Ceiling Hoist

OT2002FB Powered up/down, manual transfer along rail. 200kg capacity
OT2004FB Powered up/down and left/right. 200kg capacity (250kg option available)
